

## ROADWAYS AND WALKWAYS

### EVENT PANEL

**The Event Panel is a man-handleable temporary roadway and walkway system, suitable for both pedestrians and medium to heavy-duty vehicle access.**

Designed to keep your event on the move, the panel services a wide range of event traffic, which includes pedestrians and light vehicles through to high volume traffic and heavy commercial vehicles.

Offering strength and durability, the Event Panel ensures that the load-bearing capacity of the existing ground is vastly improved and, once deployed, it allows rapid and safe access for pedestrians and the heaviest of loads across stable ground.

Thanks to its flat surface, it also helps protect the ground as well as travelling vehicles, making it the perfect solution for events held in delicate areas such as public spaces, parks, sporting venues and stadiums where preservation is essential.

Developed to reduce trip hazards and meet the needs of both pedestrian and vehicle use, the Event Panel has been designed with integrated fixings and joints coupled with a continuous smooth surface. There are no connecting plates on the surface of the panel and all bolt heads are captive within the panel.

Additional benefits include its light design, which not only facilitates installation without using large installation vehicles, but also minimises transport costs.

- **Suitable for**
- Level, stable ground
- Events, mainly due to smooth surface
- Delicate areas i.e. pitch coverings, parks, golf courses
- Car park access

- **Unsuitable for**
- Soft ground conditions
- Large construction contracts
- Complex installations need site visit
- Tracked vehicles
- Steep gradients

- **Specification**
- Weight - 164kg
- Length - 2,000mm
- Width - 3,000mm
- Height - N/A
- Area - 6m<sup>2</sup>
- Depth/Thickness - 48mm
- Construction - Aluminium
- Carrying Capacity (single element) -
- Dependent on ground conditions
- Carrying Capacity (configuration) -
- Dependent on ground conditions
- Conditions for use - Can be installed in multiple widths and layers to create a suitable surface for any access that may be required

- **Benefits**
- Can be installed in multiple widths and layers
- Ramps available
- Pedestrian and vehicle friendly
- Symmetrical joints so no trip hazard

- **REDUCES TRIP HAZARDS WITH INTEGRATED FIXINGS AND JOINTS**
