

ROADWAYS AND WALKWAYS

LD20 ROLLS

The LD20 is a roll-out temporary roadway and walkway system, suitable for both light-duty vehicle access and pedestrians.

This light-duty system is capable of taking vehicle loads up to 20 tonnes and offers unrivalled speed on installation. The capacity to install a 40-metre roadway in under 5 minutes using a forklift makes it ideal for applications where last minute access or mass coverage is required.

LD20 can be used in many settings such as pedestrian walkways, access for vehicles moving equipment in and around site, or public access to car parks.

Suitable for

- Level, stable ground
- Pedestrian or light vehicle use
- Quick assemble system ideal for hard standing working areas

Unsuitable for

- Uneven ground and adverse cambers
- Complex installations need site visit
- Tracked vehicles
- High frequency traffic

Specification

- Weight - 1,531kg
- Length - 20,000mm - 25,000mm
- Width - 3,000mm
- Height - N/A
- Area - N/A
- Depth/Thickness - 22mm
- Construction - Aluminium
- Carrying Capacity (single element) -
- Dependent on ground conditions
- Carrying Capacity (configuration) -
- Dependent on ground conditions
- Conditions for use - Can be installed in multiple widths and layers working upto 25m lengths, to create a suitable surface for any access that may be required

Benefits

- Quick installation as rolls out
- Pedestrian and vehicle friendly
- Lightweight
- Can be transported by forklift truck

UNRIVALLED INSTALLATION SPEED AND RAPID LIGHT-DUTY ACCESS FOR VEHICLES AND PEDESTRIANS
