

ROADWAYS AND WALKWAYS

SUPA-TRAC

Supa-Trac is a plastic temporary walkway and pitch covering system, suitable for pedestrian access.

This system can also be used to provide hard standing pads suitable for car parking, small walkways, covering grass surfaces or even a helipad.

When used for vehicle access, this flooring system works best laid in large pad areas but it can be used as a walkway from a basic 1.15m width upwards.

The lightweight panels can be laid quickly and easily without the need for tools or additional equipment. When de-rigging a large pad area, a simple screwdriver is used to release the locks allowing for swift removal.

The high-vis ramps that are fitted around the edges aid wheelchair access for disabled use and prevent trip hazards.

Suitable for

- Light vehicle use in pad format
- Standing pad
- Vehicle weights of 3.5t per axle

Unsuitable for

- Heavy vehicles
- Use as a roadway

Specification

- Weight - 9.2kg² - 2.02kg per section
- Length - 220mm
- Width - 960mm
- Height - N/A
- Area - 3.16m² (sheet of 15 panels)
- Depth/Thickness - 35mm
- Construction - Plastic
- Carrying Capacity (Single Element) - Light vehicles dependent upon ground conditions
- Carrying Capacity (Configuration) - Light vehicles dependent upon ground conditions
- Conditions for use - Can be installed in multiple widths to create a suitable surface for pedestrian and light vehicle access

Benefits

- Pedestrian friendly
- Hi-vis ramps
- Quick and easy to install

LIGHTWEIGHT AND SIMPLE TO INSTALL, WITH NO ADDITIONAL TOOLS OR EQUIPMENT REQUIRED
