

Equipment Rental Solutions

Security Solutions

A Leading Provider Of Site Security Solutions

As the leading rental company in the UK and Ireland, Sunbelt Rentals provide specialist, tailored security equipment and solutions to protect your premises.

Whether you are looking to secure a construction site, inner city renovation project or warehouse facility, we can supply and install a tailored solution to suit any location and any requirement. With next day delivery available we can rapidly deploy a comprehensive range of products directly to your site, from fencing and barriers to temporary CCTV and site welfare and accommodation.

Our team of experts have decades of experience delivering tailored solutions across a range of sectors and industries, including commercial, retail, healthcare, education, aviation, government, logistics plus many more.

Strategic Partner Services

Through our strategic partnerships, we can also provide a range of complementary services to support your operations, including:

Complimentary Services

We also offer:

- Key holder response
- Cleaning services
- Mobile guarding patrols
- Waking watch
- Vacant property patrol
- Fencing & Barriers

Manned Guarding

Through our trusted security partners, Sunbelt Rentals provides professional manned guarding services tailored to your site requirements. Following an initial site survey, trained security personnel carry out regular patrols in line with agreed assignment instructions.

Patrols are digitally logged, including time-stamped images captured at specified locations, with reports provided directly to the control room.

K9 Security

Through our trusted security partners, Sunbelt Rentals also provides professional K9 security services to enhance site protection. Following an initial site survey, experienced security handlers and trained patrol dogs operate in accordance with agreed assignment instructions, providing a highly visible deterrent and enhanced detection capability for vulnerable or high-risk sites.

Temporary CCTV

CCTV systems are still one of the most effective deterrents against crime, including theft, vandalism and trespassing.

CCTV provides a cost-effective solution for protecting entrances, offices, access points, and other vulnerable areas across your site.

Following a site assessment, we rapidly deploy robust, vandal-resistant CCTV systems that deliver reliable, around-the-clock monitoring and are strategically positioned to maximise coverage.

Your boundary is the first line of defence and should always be protected.

If you are looking for a cost effective first line defence why not try our PID system. Perimeter Intruder Detection (PID) systems are one of the top crime deterrents across the UK and provide a cost-effective security solution. Ready for instant deployment with long duration battery life they are an effective and reliable asset protection solution.

Leave the how to us.

			
Product description	P.I.D. (Perimeter Intruder Detection)	M.I.D.I. (Midi Intruder Detection)	H.I.D. (Heightened Intruder Detection)
Height	1.4m	3.75m	6m
Weight	30kg	175kg	520kg
Cameras	4 X ajax 360 motion cameras	3 X 4mp wide angle cameras with or without ai	4 X 4mp cameras with optional ai
Image/video	Still images	Live video and audio	Live video and audio
Playback		Live playback through app	Live playback through app
Storage	Cloud based	Secure onboard storage	Secure onboard storage
Power	Solar and battery	Solar and battery	Solar and battery
Battery	36ah lithium battery	Heated li-ion batteries	Heated li-ion batteries
Solar panels	4 X solar panels	4 Solar panels	4 Solar panels
Monitoring	Arc monitored	Arc monitored	Arc monitored
App access	Ajax viewing app	App access	App access
Audio features	External horn notifications	Built-in two-way audio	Built-in two-way audio
Security features			Anti-climb spikes
Extras	Optional additional battery	C/w winter pack	C/w winter pack

Security Solutions

Access Control Solutions

Controlling who has access to your site, and when, improves your site security and will help to reduce the risk of unlawful entry and theft.

We stock a range of traditional half height and full height turnstiles that can be integrated into your fence line to create a complete barrier, providing the only access point. Our turnstiles help manage the safe and efficient flow of people entering and leaving site. They can be integrated with personnel ID badges and portable muster points with badge readers, providing accurate tracking of site access and attendance.

Seamless Access Control

Designed for smarter, faster and safer site access, our system supports a wide choice of ways to access site, including RFID, smartphones, smartwatches, cards and biometrics. These options streamline entry, ensuring only authorised personnel are on site, reducing delays and improving security.

Smart Padlocks

Smart Padlock provide a simple way to control and monitor access to gates, compounds, containers, fuel bowzers and other secured areas.

Users can unlock the padlock through the Knowio app or with unique passcodes, removing the need to manage and distribute physical keys. When connected through the gateway, the system provides real-time visibility of padlock activity and can alert teams when a lock is opened or has not been properly closed.

- **App or passcode access** – Open the padlock through the Knowio app or using unique passcodes.
- **Real-time status** – Know when a padlock has been opened and whether it has been left unclosed when used with the gateway
- **Temporary access** – Issue temporary access through the app or a duration-based passcode, ideal for contractors, drivers and visitors.
- **Restricted access hours** – Control when users are permitted to gain access, with one-off access available through the Control Room verification process.
- **Long battery life** – Provides 1 year+ battery life and can be recharged in approximately one hour.
- **Security alerts & audit trail** – When used as part of AccessIQ, activity can trigger critical alerts and provide a time-stamped record of access events.
- **Supports CCTV integration** – Padlock actions can be linked with CCTV to provide a visual snapshot of access events

Smart Site Security & Access Control

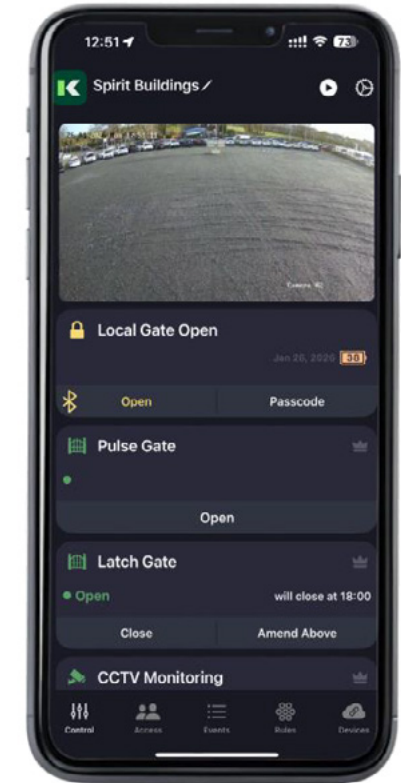

Knowio Smart Site Security & Access Control brings gates, padlocks, CCTV and other site security systems together within one intelligent platform.

Designed to improve security while reducing the time and complexity involved in managing multiple sites, it gives teams real-time visibility and greater control over who can access compounds, containers, fuel bowzers and other secured areas.

The platform combines physical and electronic security with off-grid capability, helping create a connected security solution even where mains power or local internet is unavailable.

Our Smart Ecosystem offers:

- Real-time security visibility
- Controlled site access
- CCTV integration
- Full audit trail & reporting

Traffic Barriers

With increasing focus on site security, operational efficiency, and environmental reporting, traffic barriers have become an essential component of modern site management.

Designed to control and monitor vehicle access, our barrier solutions provide a secure and efficient way to manage incoming and outgoing traffic while maintaining a clear audit trail of site activity.

At Sunbelt Rentals, we offer fully configurable traffic barrier solutions tailored to the specific requirements of each site. Whether deployed as a standalone access management system or integrated with our wider security portfolio, including CCTV, ANPR, and remote monitoring services, our barriers provide a seamless solution that enhances both security and site intelligence.

Traffic and Carbon Guard barriers

With the introduction of PPN 06/21, businesses undertaking government contracts valued over £5 million are now required to accurately report their Scope 3 carbon emissions.

This presented a significant challenge for many organisations, particularly when capturing reliable data related to site access and visitor movements.

At Sunbelt Rentals, we recognised this challenge early and worked closely with our suppliers to develop a tailored solution. The result is a system that not only enhances site security, but also provides accurate, auditable reporting on incoming and outgoing vehicles, distances travelled, and associated carbon emissions.

Fully customisable to meet the specific site requirements, the solution can be seamlessly integrated with our wider security offering.

Key features include:

- Boom length up to 5.5m
- Optional Automatic Number Plate Recognition (ANPR)
- Solar, mains or battery-powered options
- App, fob and fully automated entry options
- Full integration with our other security solutions

A.I. Detection Safety Cameras

Enhance site safety and security with intelligent, scalable A.I. detection.

Our range of security cameras and off-grid CCTV, now feature optional AI detection software that can be tailored to your site.

Our range includes:

- **PPE detection** – Identifies hard hats, hi-vis and other safety equipment
- **Vehicle analysis** – Vehicle counting, speed monitoring and ANPR
- **Health & Safety** – Detects slips and falls, hazardous zones and near misses
- **Occupancy detection** – People counting, transit time and more
- **Human form recognition** – Behaviour detection and missing persons
- **Object detection** – Detects left objects, vape, fire and moved objects
- **Unusual behaviour** – Logs and records unusual behaviour

Alarm Receiving Centre Monitoring

At Sunbelt Rentals we understand that evidence storage and availability is key to protecting your staff and property.

That's why we are partnered with certified Alarm Receiving Centres (ARC) to ensure that your sites are protected 24/7.

All of our CCTV monitoring solutions are bespoke to meet our customer's specific needs, ensuring continuous protection during non-operating hours. As an additional measure our ARC monitoring centres use E-Care which continuously monitors the CCTV towers signal to ensure no gaps in your security.

How does an ARC (Alarm Receiving Centre) work?

Upon activation of one of our detection cameras, a signal is sent to the ARC to inform them of an intruder. This is then investigated instantly to verify whether the alarm is authentic and take the appropriate response. If the intrusion is genuine the ARC makes contact with the intruder via tower communications, and then follows the pre-agreed action plan. This is dependent on the customer and can be anything from contacting key-holders to the emergency services.

Post event the customer will then receive an incident report detailing:

- Time & Date
- Location
- Footage of incident
- Response actions
- Communications log
- Outcome
- Recommendations

Wireless Fire Safety System

Sunbelt Rentals are proud to offer the U.K's first integrated, wireless fire alarm and grade 2 security system for enhanced site safety and control.

Delivering scalable, EN54 rated, wireless fire detection and alert systems, designed to keep your site protected without the need for complex wiring.

Key features:

- Battery powered – no cables required
- Connects via Ethernet, Wi-Fi or dual SIM
- Visual and audible warning sirens
- Fully EN54 rated
- Alarm transmission within 3 seconds
- Full integration with security systems
- Manual call points with optional reset functionality
- Easy control and configuration via dedicated application
- Can be added to security systems for intergration and single app viewing and operation

Communications

Communication is vital to keeping your premises, people and assets secure.

Whether it is your team being able to keep in touch with each other as they move around site, or being able to access systems securely, having reliable and durable communication equipment is an essential part of your overall security solution.

Communications Support Units

Our Communications Support Units are ideal for larger sites which require a one-stop-shop for all of your communication needs. Tailored to your requirements, it comes with welfare facilities, the latest equipment, and medium to large screens for displaying critical information.

With an onboard generator, the units work off grid, ensuring uninterrupted power and connectivity. For improved safety we also supply an onboard defibrillator, first aid facilities and eye wash station to help you respond quickly to any situation.

Digital Mobile Radio Communications

At Sunbelt Rentals, we provide dependable two-way radio communication solutions designed to keep teams connected, informed, and safe across every site and sector. From construction projects and co-ordinating events to remote or high-risk environments, our range of portable and mobile radios ensure instant, secure, and crystal clear communication when it matters most.

Not sure what communications solution would work best on site? Our experts can help you choose the best setup for your project.

Prefer to buy?

At Sunbelt Rentals, we understand that some projects and operations benefit from owning equipment rather than hiring it. We offer a range of high-quality digital radios, Push-to-Talk over Cellular (PoC) devices, and repeaters, providing reliable communication solutions for businesses with long-term operational requirements.

Sourced from trusted manufacturers, our products deliver dependable performance, secure communications, and the coverage your teams need to stay connected across every site and sector.

Body Cameras

Body cameras act as both a deterrent and recording device, and have been proven to improve safety, confidence and accountability in a variety of confrontational or security roles. They can also provide a source of evidence if needed.

Our body cameras are comfortable and easy for your team to wear, offering crystal clear picture quality and time, date and GPS stamping.

POC (Push Over Cellular)

Our PoC radios combine the convenience of traditional two-way radios with the reach of modern cellular networks. Operating over 4G, 5G and Wi-Fi, these devices enable instant communication across unlimited distances, with features including individual and group calling, GPS tracking, and dispatch management via cloud-based software. They're perfect for large, multi-site operations, logistics, and event management delivering flexibility, clarity, and control.

Satellite Phones

Our satellite phones and satellite Push-to-Talk (PTT) handsets provide dependable, global communication in locations where traditional mobile networks are unavailable or unreliable. Ideal for remote construction projects, offshore operations, utilities, emergency response, and lone workers, they deliver instant, reliable voice communications with worldwide coverage.

Rugged, easy to use, and built for demanding environments, they help keep your teams connected, informed, and safe wherever the job takes them.

Mobile Tracking Solutions

Perfect for small plant and spots where conventional tracking isn't suitable.

The Tracking Label is a compact, discreet solution designed to give businesses greater visibility of assets as they move between sites, depots and operational locations.

Its slim, peel-and-stick format makes it particularly suitable where a conventional tracking device may be too bulky, allowing tracking technology to be applied to a much wider range of equipment and assets.

The label concept combines location visibility with temperature monitoring, helping organisations maintain a more accurate picture of where assets are and their condition.

Protect your hired machinery from theft

Hiring plant and equipment?

We can help you take the right steps to keep it secure.

Every stolen machine costs you time, money, and reputation. With theft on the rise in construction, agriculture, and industrial sectors, prevention is cheaper and easier than recovery.

We offer a range of theft prevention solutions designed for various types of equipment - from small towable units to larger tracked machinery:

- **Heavy-Duty Chain and Block** – Physical deterrents for towable and small equipment
- **Hydraulic Ramlocks** - Immobilise critical components
- **Tracklocks** – Secure hydraulic systems on tracked machinery
- **Add Extra Protection** – Ask about our Damage & Loss Waiver at hire

We've got you covered

Our Damage & Loss Waiver gives customers peace of mind that their hired products are protected:

- Coverage of up to £100,000 per incident
- Costs 15% of the equipment hire rate
- Low excess starting at just £25
- Covers loss or damage anywhere in the UK, including during transit
- Fewer restrictions than most standard policies
- Claims can often be settled within 24 hours

Perimeter Protection

Your boundary is the first line of defence and should always be protected.

Fencing & Barriers

Something as simple as a fence around the perimeter of your site can be enough to deter unauthorised personnel from entering. We supply a wide variety of fencing and barrier systems for a range of applications, with a free site survey to provide a calculated solution.

ARX Security Fencing is a rapidly deployable, surface-mounted high-security perimeter system engineered to provide superior protection against climbing, cutting and unauthorised access. Certified to recognised security standards and capable of meeting sports ground crowd loading requirements, ARX offers an ideal solution for major events, critical infrastructure, stadia, fan zones and secure operational compounds where traditional temporary fencing would not provide sufficient levels of security.

Need additional support on site?

We can supply fully trained security personnel

to support your project.

Contact us to discuss your requirements.

Concrete Barriers

Concrete barriers are a highly durable temporary, or long-term solution, for preventing unwanted vehicular access to your site, preventing fly tipping or creating barriers for crowd control. With rapid deployment and fork lift pockets for easy placement, we can help protect your site from the time consuming and expensive process of removing people or waste.

ARX Security Fencing

A rapidly deployable, surface-mounted high-security perimeter system engineered to provide superior protection against climbing, cutting and unauthorised access. Certified to recognised security standards and capable of meeting sports ground crowd loading requirements, ARX offers an ideal solution for major events, critical infrastructure, stadia, fan zones and secure operational compounds where traditional temporary fencing would not provide sufficient levels of security.

Introducing Compound Solutions

A complete, expertly delivered site.

At Sunbelt Rentals, we have brought together a multi-skilled team of specialists focused on delivering fully functional, efficient compounds. With an unmatched equipment portfolio, we can streamline logistics, finance, project management, and operational expertise into one seamless service.

A dedicated project team will:

- Assess your needs and survey your site
- Design a tailored layout, recommending the most effective equipment combinations
- Coordinate operational teams and deliveries
- Hand over your completed compound on time and within budget
- Our in-house teams work perfectly together to supply everything you need for your compound.

Products include:

- Trakway, ground protection, and safe access
- Fencing and barrier systems
- Accommodation and office facilities
- Welfare units, toilets, and drying rooms
- Lighting solutions
- Power generation
- Traffic management
- Fire protection services
- Security

All necessary plant, tools, and specialist vehicles are available to deliver your build. For larger projects, an on-site hire facility can be provided, improving convenience for your workforce and reducing disruption to local residents.

Whether you are establishing site headquarters or multiple satellite sites, our compound solutions deliver the expertise, and efficiency to make it happen.

Providing rental equipment and managed solutions into every market and sector

 **Air Quality Control**
Advanced systems to capture, clean and control airborne hazards

 **Barriers & Fencing**
Secure, adaptable systems for crowd perimeter and threat control

 **Broadcast & Events**
LED, video, lighting, sound, rigging & Scenic production

 **Film & TV**
Specialist camera, lens, grip and lighting for seamless on-set production support

 **Floor Preparation, Cleaning & Maintenance**
Advanced equipment for efficient, professional surface care

 **Ground Protection Mats**
Engineered pedestrian and vehicle roadway systems with full site planning support

 **Heating & Cooling**
Climate solutions for comfortable, controlled working conditions

 **Lighting**
High-performance lighting for safe, well-lit environments

 **Lifting & Handling**
Safe, adaptable equipment for moving loads with precision

 **Low Level Access**
Compact access platforms for safe, efficient working at height

 **MEWPs & Powered Access**
Elevated access platforms for safe, efficient working at height

 **Non-Mech**
Site essentials for safety, access and ground preparation

 **Plant & Attachments**
Extensive plant fleet with specialist attachments for every task

 **Power Generation**
Scalable power systems with clean energy and critical backup

 **Railway Maintenance**
Specialist tools for safe, efficient on-track maintenance operations

 **Safety, Communications & Security**
Integrated site safety, monitoring and communication solutions

 **Surveying Equipment**
Precision instruments for accurate site measurement and layout

 **Temporary Bridges**
Modular bridging systems for safe, rapid pedestrian or vehicle and plant access

 **Test & Monitoring**
Precision instruments for electrical, environmental and mechanical testing

 **Tools**
High-performance tools for building, landscaping and finishing tasks

 **Traffic Management**
Complete traffic control solutions from survey to installation

 **Training**
Accredited courses delivered by expert trainers nationwide

 **Utilities & Pipeline**
Advanced equipment for civil, gas and water operations

 **Welfare & Storage**
Comfortable welfare units and secure on-site storage options

Whatever your rental equipment requirements...

Leave the **how to us.**
